

NEW! ELIMINATOR

Introducing the all-new Rugby Eliminator—redesigned and improved to offer the same trusted durability with enhanced flexibility and upgraded features. Available in Carbon, Stainless, and Aluminum, the Eliminator is the hardest working dump body in the field. The new design includes an interlaced understructure, standard across all Eliminator models with an optional crossmemberless understructure available for carbon and stainless steel bodies. The Eliminator also features a bolt-on cabshield, updated vertical rear posts, refined side and rear heights, additional marker lights on each rear corner post for improved visibility, and a redesigned rear apron with $\frac{3}{4}$ " clearance lights for a sleek, modern look. Plus, the upgraded bolt-on EZ-Latch™ system ensures easier installation, maintenance, and reliability. With these enhancements, the Eliminator is built to work harder, last longer, and keep your fleet moving efficiently.

INTERLACED UNDERSTRUCTURE

For enhanced strength and long-lasting performance.

BOLT-ON CABSHIELD

Fits all major chassis types and reduces distributor need for unique inventory to meet different chassis heights.

OPTIONAL FOLD DOWN SIDES

Choose fold down sides for a versatile body with sides that drop down 180° using a centrally located quick-release lever.
